

Quick Change Connectors

TCC's Quick Change connectors give you the flexibility to use whatever connector you need with your wattmeter. Simply remove your wattmeter's standard fittings and replace with one of our Quick Change connectors. You can use our universal fitting with the many connectors available in one of TCC's adapter kits to quickly change your wattmeter to fit whatever is needed. When you never have to worry about your wattmeter being compatible with the connectors you have on hand the job will get done right, and in record time.
